

THE NEW WICKED COLLISION™

The core and cover combinations produce some of the strongest motions out there, and the new Wicked Collision is even stronger and more angular. The cover is the key for this release. You've seen the Cohesion additive before, but it's never in the DV8 line. Adding Cohesion to the best-performing coverstock base in bowling is like putting it on steroids. For this release, we added Havoc additives that helped the Collision line perform so well; this cover is called HK22C - Havoc Solid. The new Wicked Collision is one of the biggest hooking shiny balls available, and one you won't want to be without!
